Proclaiming Evidence for Truth

THIS WEEK'S CREATION MOMENT

Learning from the Dragonfly

"Come, ye children, hearken unto me: I will teach you the fear of the LORD." -Psalm 34:11

Evolutionary naturalism paints the picture of life as if it were a haphazard series of accidents that just barely resulted in a range of living things that just manage to survive.

This fanciful picture destroys our sense of wonder over the sophisticated engineering designs in nature.

Consider the mystery of flight, for example. Some evolutionists suggest that perhaps birds are descended from lizards that fell out of trees a lot. Other evolutionists say that birds came from lizards who grew wings, not for flight but to chase down and catch insects. Yet, they have little to say about the fact that we humans have come by most of our sophisticated knowledge about flight from studying the birds.

Then there is the problem, for the evolutionist, of how flight accidentally evolved so many times for so many creatures. Scientists studying the dragonfly are learning even more secrets of flight. Our best high-performance aircraft can barely lift themselves off the ground. However, the dragonfly can lift 15 times his own weight into the air. Scientists have learned that this is because the dragonfly's wings are designed to create little whirlwinds over their top surfaces. These whirlwinds are the secret to creating incredible lifting power. Ways are now being planned to apply this secret to new aircraft designs.

The engineering excellence found in nature and from which we have learned so much even in this day of interplanetary probes is not witness to a mindless process of evolution, but to a wise and mindful Creator.
